

DESCRIPTION

The N1736A Handheld Tester provides advanced TIMS functions for testing and qualifying copper phone lines for DSL and other high-speed data transmission services. Some features include:

- **Line Certification:** The ALT2000 can perform loop capacitance and/or loop resistance measurement and automatic calculation of the maximum expected ADSL upstream and downstream data rates.
- **Maintenance and Troubleshooting:** The ALT2000 has the capability to passively monitor an in-service transmission line without affecting performance.
- **Line Prequalification:** Use the ALT2000 as a copper pair prequalification test tool. Used in a stand-alone mode or in conjunction with another ALT2000 or LT2000 it can perform the following metering functions: (Attenuation, Noise and Level, Near End and Far End Cross Talk, Return Loss, Logitudinal Balance)
- **Additional Key Features:** Auto tests in Master/Slave mode (RLC Measurements, Spectrum Analysis, Storage and Print Capability, Intuitive Menus for Ease of Use, Wide Range of Analog Measurements)
