Definitions

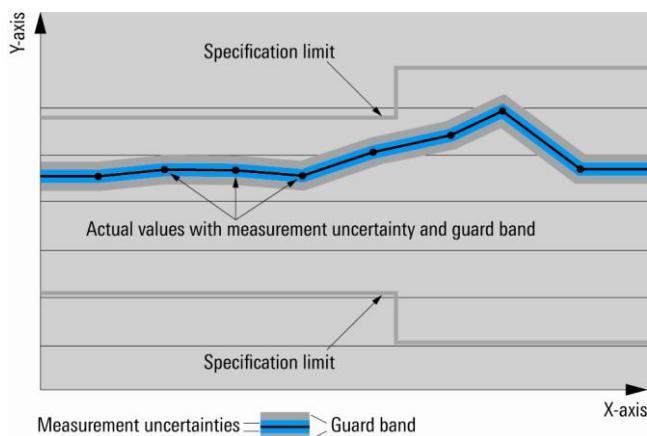

General

Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 60 minutes warm-up operation
- Specified environmental conditions met
- Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable
- Unless stated otherwise, specifications apply to test ports and a nominal source power of -10 dBm

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $<$, \leq , $>$, \geq , \pm , or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with $<$, $>$ or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are indicated as follows: "parameter: value".

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

	4 GHz to 7 GHz	≥ 125 dB	138 dB
	7 GHz to 8.5 GHz	≥ 120 dB	130 dB

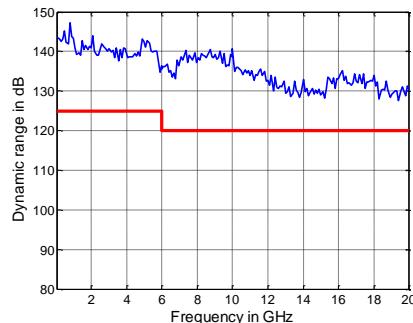

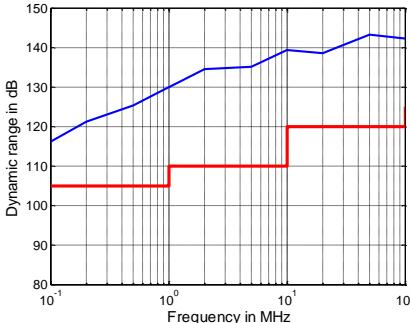

¹ The maximum number of sweep points may vary depending on the number of ports involved in the measurement.

² Dynamic range is defined as the difference between the actual maximum source power and the RMS value of the data trace of the transmission magnitude, which is produced by noise and crosstalk with the test ports short-circuited. The specification applies at 10 Hz measurement bandwidth, without system error correction. The dynamic range can be increased by using a measurement bandwidth of 1 Hz. Crosstalk does not limit the dynamic range.

Dynamic range in dB versus frequency for the R&S®ZNBT8.

Dynamic range in dB versus frequency for the R&S®ZNBT20.

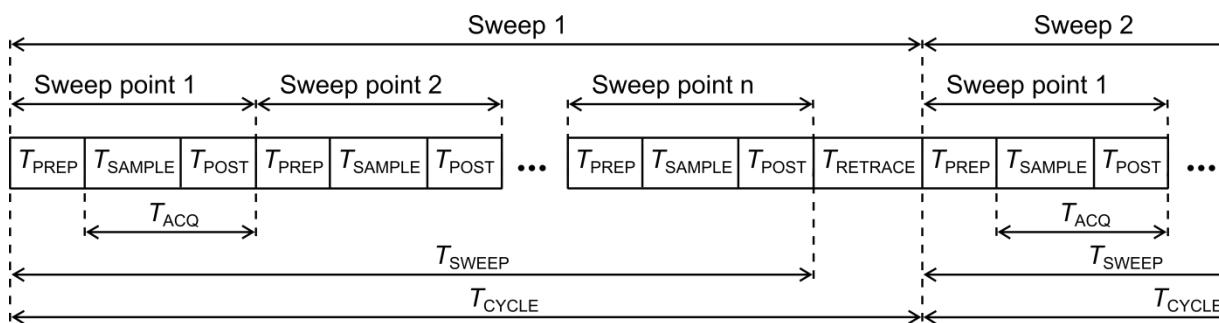

Dynamic range in dB versus frequency for the R&S®ZNBT26/40.

³ Below 100 MHz, dynamic range is typical between adjacent ports on the same horizontal level, e.g. between ports 1 and 2 or 5 and 6. Between 1.5 MHz and 2.5 MHz, dynamic range may be smaller than the specified value

Measurement accuracy of the R&S®ZNBT8

This data are valid between +18 °C and +28 °C, provided the temperature has not varied by more than 1 K since calibration. The data are valid if a R&S®ZV-Z270 calibration kit is used. This calibration kit is used to achieve the effective system data specified below. Frequency points, measurement bandwidth and sweep time have to be identical for measurement and calibration (no interpolation).

Accuracy of transmission measurements

9 kHz to 100 kHz	+5 dB to -50 dB	< 0.2 dB or < 0.5°
	-50 dB to -60 dB	< 0.3 dB or < 2°
100 kHz to 8.5 GHz	+5 dB to -40 dB	< 0.04 dB or < 0.3°
	-40 dB to -50 dB	< 0.06 dB or < 0.4°
	-50 dB to -60 dB	< 0.2 dB or < 1°

Specifications are based on a matched DUT, a measurement bandwidth of 10 Hz and a nominal source power of -10 dBm.

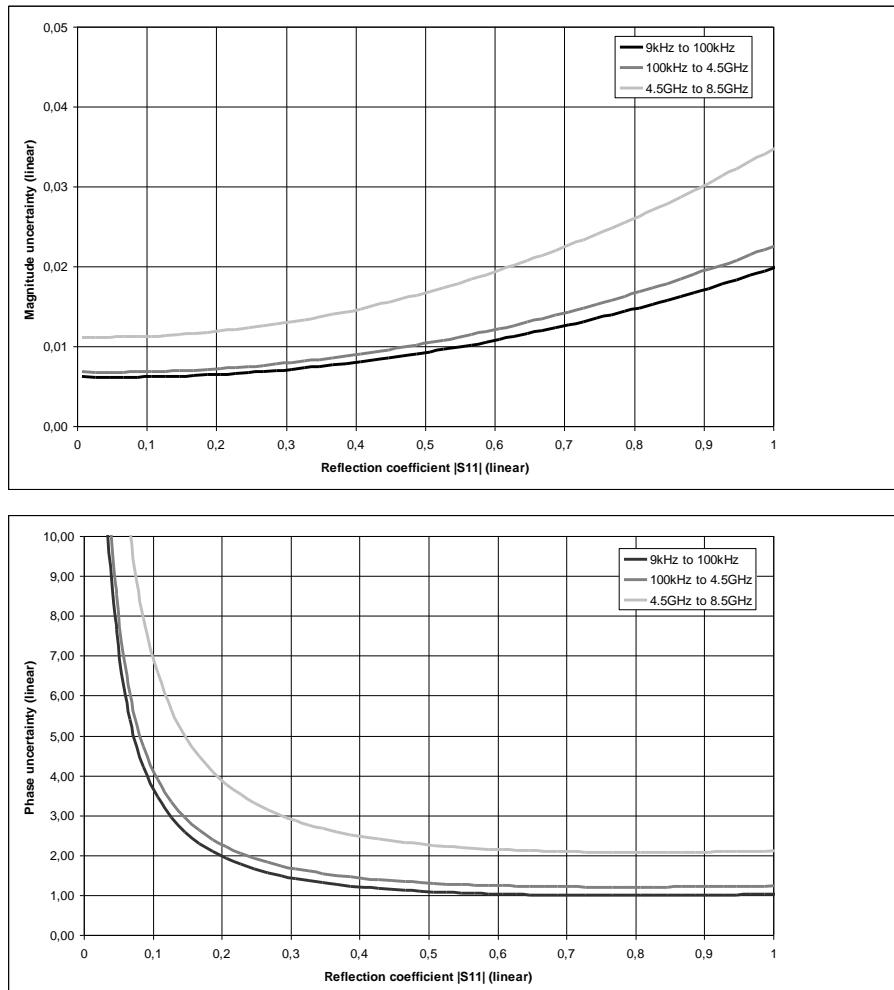

Typical accuracy of transmission magnitude and transmission phase measurements for the R&S®ZNBT8 in the frequency range from 9 kHz to 8.5 GHz.

Analysis conditions: $S_{11} = S_{22} = 0$, cal. power -10 dBm, meas. power -10 dBm.

	9 kHz to 8.5 GHz	≤ 0.1 dB	
Noise level ¹¹ at 1 kHz measurement bandwidth, normalized to 1 Hz	9 kHz to 50 kHz	≤ -125 dBm (1 Hz)	
	50 kHz to 50 MHz	≤ -130 dBm (1 Hz)	
	50 MHz to 7 GHz	≤ -140 dBm (1 Hz)	
	7 GHz to 8.5 GHz	≤ -130 dBm (1 Hz)	

Trace stability			Specification	Typical
Trace noise magnitude (RMS)	at 0 dBm source power, 0 dB reflection	IF bandwidth		
	100 kHz to 100 MHz	10 kHz	≤ 0.005 dB	0.001 dB
	100 MHz to 8.5 GHz	10 kHz	≤ 0.005 dB	0.002 dB

¹⁰ The dynamic range is defined as the difference between the actual maximum source power and the RMS value of the data trace of the transmission magnitude, which is produced by noise and crosstalk with the test ports short-circuited. The specification applies at 10 Hz measurement bandwidth, without system error correction. The dynamic range can be increased by using a measurement bandwidth of 1 Hz. Crosstalk does not limit the dynamic range. Dynamic range for test port pairs where the receiving port is fitted with option R&S®ZNBT8-B5xx. If the source port is fitted with option R&S®ZNBT8-B5xx and the receiving port is not, the values reduce by up to 10 dB.

¹¹ The noise level is defined as the RMS value of the specified noise floor.

Extended Warranty, one year	R&S®WE1	Please contact your local Rohde & Schwarz sales office.	
Extended Warranty, two years	R&S®WE2		
Extended Warranty with calibration coverage, one year	R&S®CW1		
Extended Warranty with calibration coverage, two years	R&S®CW2		

Extended warranty with a term of one and two years (WE1 and WE2)

Repairs carried out during the contract term are free of charge ¹⁸. Necessary calibration and adjustments carried out during repairs are also covered.

Extended warranty with calibration coverage (CW1 and CW2)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs ¹⁸ and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.

For product brochure, see PD 3606.9727.12 and www.rohde-schwarz.com
